Profile

React.js engineer building software since 2020, with experience delivering web applications, from UI architecture and reusable components to API integration, testing and deployment. Hands-on with React, Next.js and TypeScript, with experience working in a 5–10 person team and translating requirements into shipped features. Brings independent product ownership and frontend depth to a team lead role.

Technical skills

Frontend: React.js, Hooks, Context API, Redux, Next.js (SSR/SSG), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, React Query
Architecture & quality: Component libraries, design systems, responsive design, Jest, React Testing Library, integration testing, cross-browser debugging
APIs & delivery: REST, GraphQL, JSON, Git, sprint planning, CI/CD, AWS, GCP, Firebase, Vercel

Professional experience

Independent Software Engineer *Nov 2025 – Present*

- Built and published **three Android apps**: JaapMitra, Saarthi and Pachisi. Own product design, architecture and releases using React Native, Expo and TypeScript.
- Launched Choghadiya Now, with city-based timing calculations, location search and English/Hindi content.
- Delivered one freelance project: a patient and inventory management MVP for a US healthcare startup in **two months** using React, TypeScript, Tailwind CSS and React Query.

BuildShip | Software Engineer (Contract) *Apr 2025 – Nov 2025*

- Built **20+ backend workflow templates** integrating Gmail, Google Calendar, Linear and other APIs for BuildShip's automation platform.
- Automated Rowy-to-BuildShip table migration and Bring Your Own Firebase setup, reducing manual configuration for migrating users.

ByteEat | Co-Founder & Sole Developer *Dec 2024 – Mar 2025*

- Built ByteEat, a restaurant ordering MVP with QR menus and real-time order management using Next.js, TypeScript, MongoDB and Prisma; owned **product design, architecture and delivery**.

EXPIA | Software Engineer (React.js / Next.js) *Sep 2022 – Nov 2024*

- Built the Norg.ai chatbot dashboard in React and TypeScript, including self-service model training, API integration and **reusable UI components** with Jest and React Testing Library coverage.
- Delivered a Next.js frontend integrated with Umbraco CMS for automatictechnology.com, supporting localized content across multiple regions.
- Worked within a team of 5–10 on feature delivery and sprint planning; diagnosed rendering issues and improved application stability across client projects.

Intellemo | Frontend Engineer *Mar 2022 – Sep 2022*

- Migrated the company website to Next.js server-side rendering, increasing SEO visibility threefold within a month of launch.
- Shipped a drag-and-drop form builder **two weeks ahead of schedule**; received the Hero of the Month award. Fixed Konva.js canvas rendering issues in the design editor.

Mobilicis / Mobiru India | Founding Engineer *Aug 2020 – Feb 2022*

- Built a mobile price-comparison platform with React and Django, backed by pricing data collected from 10+ e-commerce platforms.
- Co-developed the oruphones.com trade-in MVP, which processed 1,000+ smartphone valuations during its initial launch phase.

Education

B.Sc. Information Technology (Lateral Entry) | DIPS Institute of Management & Technology, Jalandhar
2025 – 2027 (expected)
Diploma in Computer Science Engineering | Mehr Chand Polytechnic College, Jalandhar
